

IL FRANGENTE ARTE

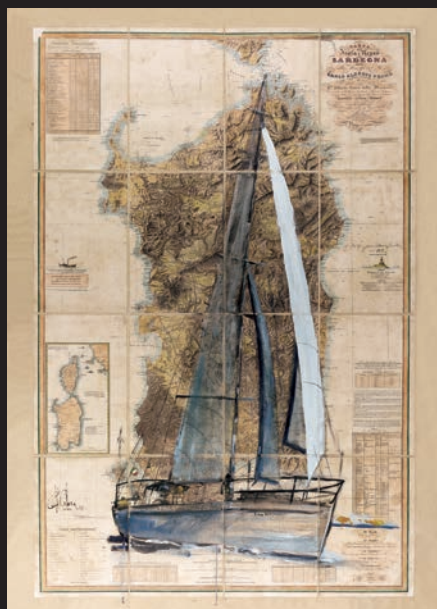

*Il pittore Corrado Cohen, traendo
ispirazione dal mondo dello yachting
e della cartografia nautica,
ha creato un'originale, quanto unica,
collezione di dipinti utilizzando
la carta nautica come supporto cartaceo.*

*Queste opere sono realizzate
in stampa Fine Art su carta Tintoretto,
che riproduce fedelmente i colori
dell'originale e garantisce una perfetta
qualità per svariati anni.
Ne risulta un'opera raffinata che incontra
il gusto degli appassionati del mare.*

*Elisabetta D'Oro unisce la passione per il mare
all'abilità nel disegno a pastello.
Suo soggetto preferito sono i fari,
luoghi affascinanti sospesi tra la libertà del mare
e la sicurezza della terraferma, che la pittrice
colleziona durante i suoi viaggi in giro per il mondo.*

ARGENTINA—CHILE

SOUTH-EASTERN PART OF TIERRA DEL FUEGO

DEPTHS IN METRES
SCALE 1:550 000 at lat 54°30'

Depths are in metres and are reduced to Chart Datum, which is approximately the level of Lowest Astronomical Tide. Heights are in metres. Underlined figures are drying heights above Chart Datum, of other heights are above Mean High Water Springs. Projection: Mercator.

Sources: Argentine and Chilean Government charts to 1986 with

WRECKS AND NAVIGATIONAL AIDS
Cannon lights, other navigational aids and wrecks have been marked on this chart. For details of these larger scale charts and appropriate Admiralty publications should be consulted.

LOCAL MAGNETIC ANOMALY
A Local Magnetic Anomaly is reported to exist in Bahía Navarino (33°25' S, 67°02' W approx). See Admiralty Sailing Directions for further

UNCHARTED DANGERS
The area covered by this chart has only been partially surveyed. Uncharted dangers may therefore exist, particularly within the 500 metre limit. Mariners should navigate with due caution.

KEEL
Keel ground on many shallow water banks. It is a sign of danger and should be avoided, unless local knowledge warrants passage. A warning of keel ground may be taken as indication of dangerous ground. See remarks on page 1 of Admiralty Sailing Directions.

CURRENTS
The Cape Horn Current predominates. Strong southerly flows occur in the channels between the islands. The bottom consists mainly of irregular stones, with some mud and fine sand. The current can be greatly affected by the strong and variable winds experienced in this area. See Admiralty Sailing Directions for further information.

SATELLITE-DERIVED POSITIONS
Positions obtained from satellite navigation systems are normally reliable to within 100 metres. The latitude of each point may be plotted directly on this chart, but longitudes should be marked on a separate WESTWARD map with this chart.

PORTS
Positions on this chart differ from the larger scale charts. Mariners should be aware of this. The latitude of each point may be plotted directly on this chart, but longitudes should be marked on a separate WESTWARD map with this chart.

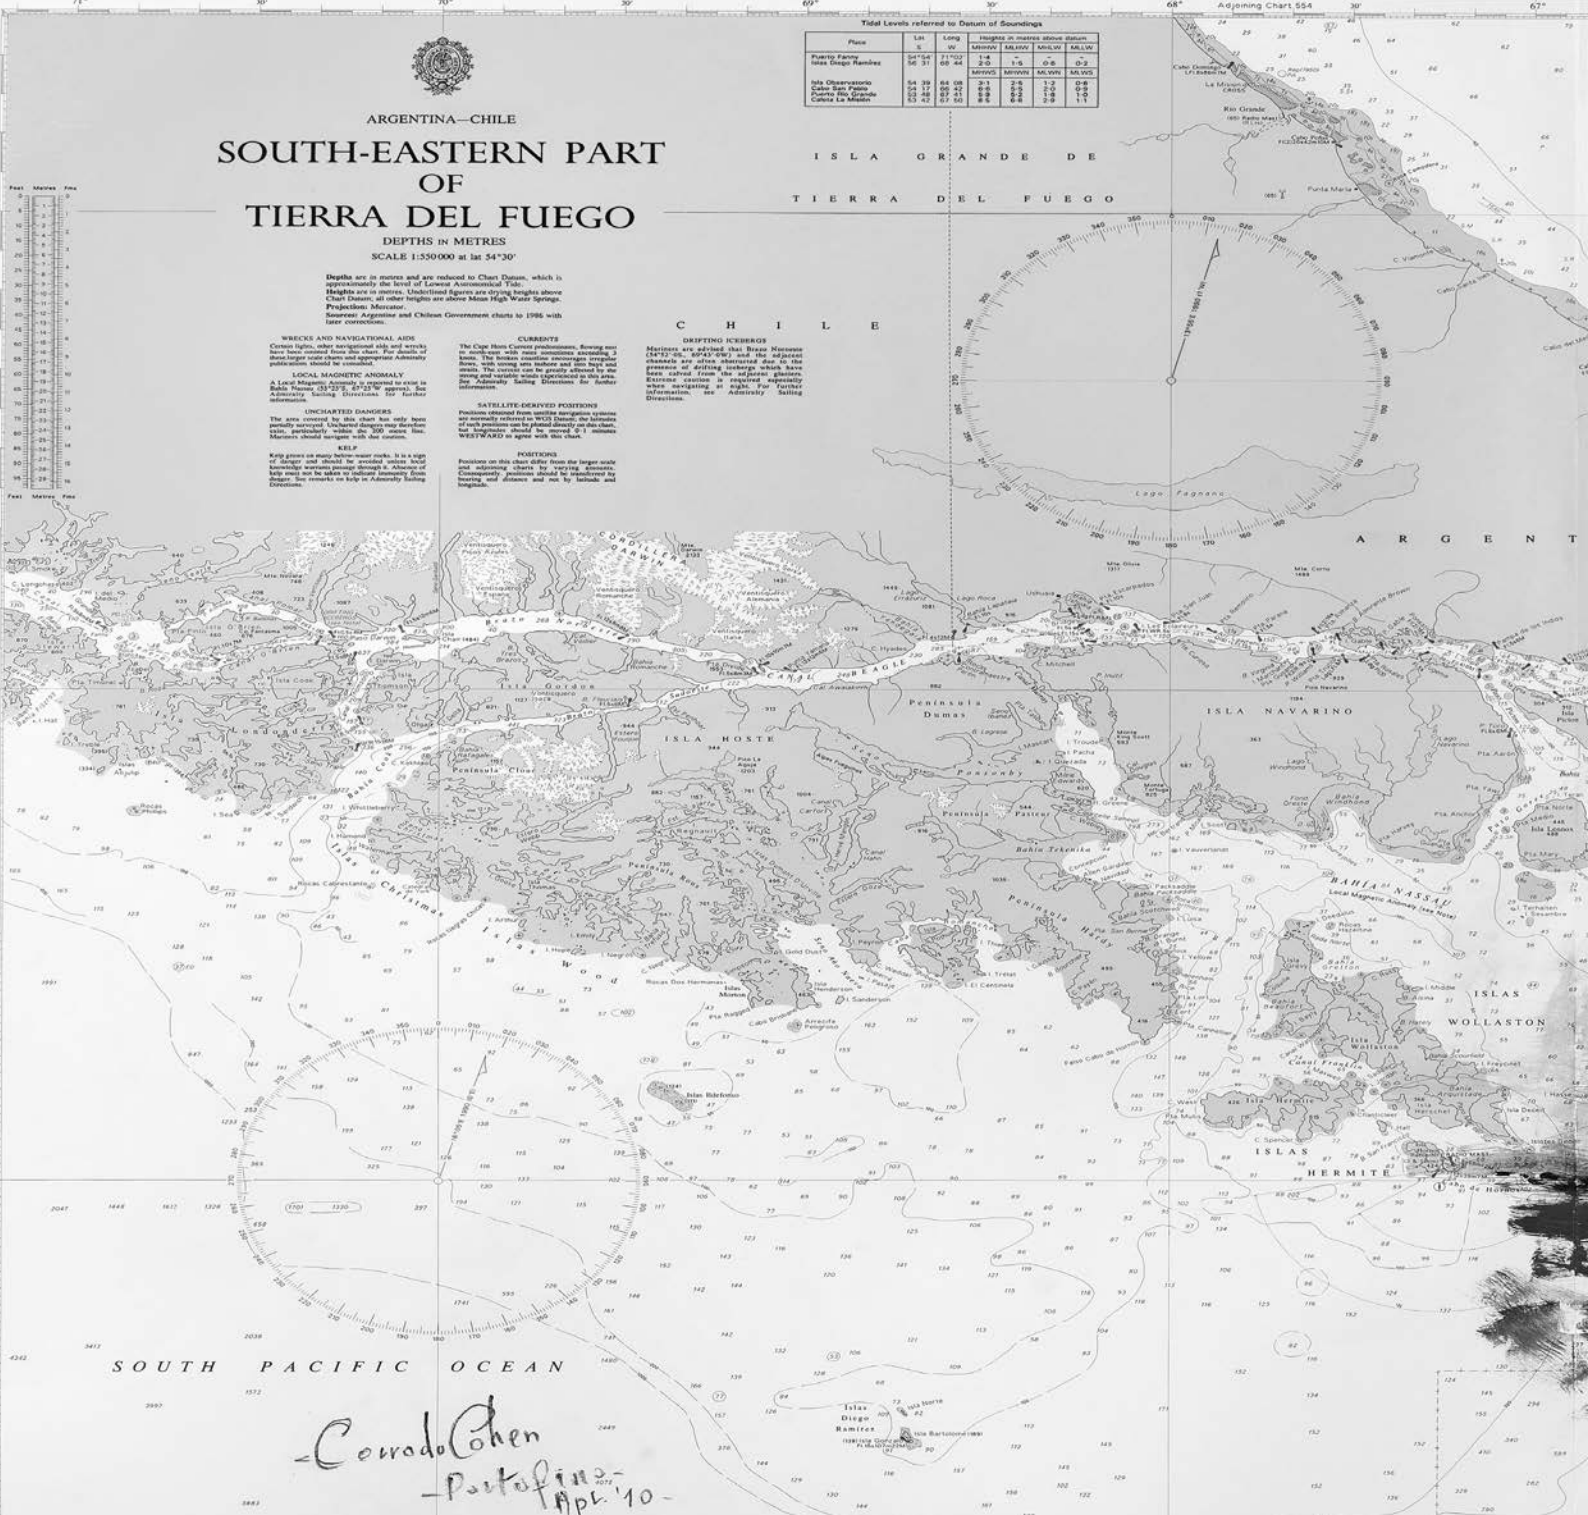

DRIFTING ICEBERGS
Mariners are advised that large icebergs (1000 to 1500 metres) are often observed due to the presence of drifting icebergs which have been calved from the adjacent glaciers. Sources: various, as reported separately when navigating, as high for further information. See Admiralty Sailing Directions.

Tidal Levels referred to Datum of Soundings

Place Lat Long Height in metres above datum

Puerto Fanning 54°34' 21°02' 1.4
Bahía Grande 54°31' 68°44' 2.0

Isle O'Higgins 54°30' 68°45' 2.5
Cabo San Pablo 54°27' 68°41' 2.5
Cabo La Mota 54°23' 68°30' 2.5
